Futrus Helps Define the Future of Healthcare.

Futrus is proud to announce their involvement with the \$1.1 billion dollar Ohio State University Wexner Medical Center. Designed by world leading architects HOK and Moody-Nolan, this pioneering expansion project is the largest in Ohio State History.

The construction includes the new James Cancer Hospital and Solove Research Institute and Critical Care Center. It will also feature one of the very few above ground radiation oncology units in the country, offering patients natural light and outdoor views during treatment. Patients will also receive nearly all of their care in the comfort of their own rooms.

Futrus® Healthcare Solutions made with Dupont™ Corian® will use their advanced, light-weight construction techniques to create casework solutions for the MRI suites, operating rooms and decentralized nurses' stations. The Futrus® Casework System is made primarily of DuPont™ Corian® and when properly cleaned does not support the growth of mold, mildew and bacteria. It is designed to help promote healthier environments for patients, their families, and healthcare workers by helping reduce the spread of Hospital Acquired Infections.

"We're immensely proud to be part of a project that is poised to change the future of healthcare," says Futrus President Mark Allen. "Our involvement with the Ohio State University Wexner Medical Center demonstrates how Futrus can meet budgetary requirements and add value to projects on the forefront of healthcare design. We look forward to unveiling the installation this year."
