## **Futrus® Launches Innovative New Solutions At The DuPont™ Corian® Booth (600), At This Year's Healthcare Design Show**

Futrus®, made with DuPont™ Corian® will be launching innovative new products within the DuPont™ Corian® exhibition space at this year's Healthcare Design Show. These new solutions include the Futrus® Contour Overbed Table™ and the Futrus® Oval Occasional Table featuring DuPont™ Corian® Wireless Charging Technology. Also on display will be the award-winning Futrus® Casework System.

Futrus® products continue to be chosen by America's top architects and leading healthcare facilities. Our focus as a company is to provide innovative, durable, healthcare furnishings that help reduce Hospital Acquired Infections (HAIs).

### **Futrus® Contour Overbed Table™**

The Futrus® Contour Overbed Table™ has already been chosen by America's number one cancer treatment center, The Memorial Sloan Kettering Cancer Center. The overbed table is designed to help protect patients in one of the areas where they are most at risk from HAI transmission. Unlike other over bed table solutions, the Futrus® Contour Overbed table top is solid throughout, so there is no laminate or rubberized edge to chip or peel. The top can also be customized, with a choice of over 120 DuPont™ Corian® colors and is available in a variety of shapes.

### **The Futrus® Oval Occasional Table**

The new Futrus® Oval Occasional Table, made with DuPont™ Corian®, is the latest addition to our Occasional Table range. Ideal for waiting rooms and lobbies, thanks to the durable and easy-to-clean design. Each table is available in over 120 DuPont™ Corian® colors and patterns and can also be designed using a combination of two colors. All Futrus® tables can be specified with DuPont™ Corian® wireless charging technology, seamlessly integrated into the table top surface, as displayed in the exhibition. They are also customizable in a wide range of heights and sizes.

### **The Futrus® Casework System**

The award winning Futrus® Casework System, made with DuPont™ Corian®, meets all the latest FGI guidelines for the design and construction of Healthcare facilities. It has been chosen by state-of-the-art healthcare facilities across America, including the Reading Hospital, Philadelphia, as part of the state's largest ever hospital expansion project. The Futrus® Casework System is constructed using DuPont™ Corian® and light-weight, moisture resistant structural framing, in a process patented by Futrus®, making it ideal for any healthcare area - from operating rooms to patient bathrooms. Easy to install and suitable for new builds or renovations and for any size patient room, thanks to the modular design.

Futrus® is a furniture company dedicated to developing solutions that truly meet the demands of commercial and healthcare environments. The design and manufacturing team is credited with over 33 years of experience as one of the Midwest's pioneering fabricators of DuPont™

Corian® solid surface. The Futrus® team combines their expert knowledge, engineering and design skills to create solid surface products that are intelligent, progressive, durable and best of all, accessible. DuPont™ Corian® is nontoxic and non-allergenic to humans, and has received NSF/ANSI 51 Certification for food contact and Class I (A) fire rating.
