News Release

FUTRUS® CASEWORK SYSTEM CHOSEN FOR PHILADELPHIA'S LARGEST HOSPITAL EXPANSION PROJECT

Reading Hospital, PA is opening their new \$354 million expansion project in the fall of 2016, the largest in Pennsylvania history. Designed by Ballinger, a Philadelphia-based architectural firm, the new hospital area will have five floors of private patient rooms and 24 new operating rooms.

Futrus® OR Casework

The award winning, Futrus® Casework System, made with DuPont™ Corian® solid surface has been specified for all of the new state-of-the-art operating rooms and 150 patient bathrooms. This casework system is constructed using Corian® and light-weight, moisture resistant structural framing, in a unique process patented by Futrus®. The Corian® surfaces are non-porous and when properly cleaned, do not support the growth of mold, mildew and bacteria. The system is designed to help promote healthier environments for patients, their families, and healthcare workers by helping reduce the spread of Hospital Acquired Infections (HAIs).

The Futrus® Casework System provides complete structural integrity even in wet environments, making it the ideal solution for the patient bathroom areas, as well as operating rooms. Ballinger was able to customize the system to meet the needs of each bathroom configuration. The Futrus® Casework Bath Module is ADA compliant and supplied prefabricated for easy and efficient installation. The bath unit features a customized Corian® thermoformed sink with off-set drain, a seamlessly integrated countertop and wall splash. The curved edge design and soft-to-the-touch surfaces also provide a warmer, more inviting environment for patients during their hospital stay.
